

## DESIGN TO INNOVATE

Our chains are used  
in many areas  
due to the wide range  
of products and the  
possibility to customise  
them for your every need

# ROBOT & Rotations

# FOR EACH ROTATION THE RIGHT CHAIN

In circular movements in a horizontal arrangement, the cable chain moving in two opposite circular directions (chains with rear bending radius). Almost all **Brevetti Stendalto** chain series can be supplied with this counter-radius. With the use of backward curved chains it is possible to create rotations both on small and large equipment. **For applications with rotations up to 180° it is possible to use only one chain. For applications with rotations over 180° it is necessary to use two chains.** For a correct usage they should be guided both internally and externally. A special inner movable frame, mounted on anti-friction skids or pivoting wheels in combination with a guide housing guarantees the rotation.

**UP OPEN**  
To increase the angle of rotation about 540° several Rotations can be built over each other

**FROM ALL SIDES PROTECTED**  
Housings available on request

**MINIMUM FRICTION**  
Skids and rollers for reducing the friction

**ALWAYS GOOD GUIDED**  
The movable inner frame ("Banana") guaranteed the proper run of the rotation

**WELL-THOUGHT-OUT ACCESSORIES**  
We also provide on request special moving brackets for a proper and safe cable guiding

# DYNAMIC CABLE PROTECTION

The series **ROBOT** has been specifically designed for circular movements. In its continuous technological evolution, **Brevetti Stendalto has revolutionised the concept of circular chains.** Due to the particular construction of the links, permit them to rotate up to 540°. The chains from the "ROBOT" series are **self-supporting and they do not need any support up to 200°.** For applications with rotations exceeding that value it is necessary to use its own appropriate accessories like support rollers or support hooks.

Optional support hooks or support rollers for larger turning areas

Inclined mounting bracket

Connecting pins for increased stability - both the inner as well as at the outer sideband

Guiding support

Removable frame for quick installation

Type	Quote A	Quote C	Quote D	Radius
